Hiring Manager

[Company Name]

Dear Hiring Manager,

During my internship at **CodeSoft Solutions**, I optimised Microsoft SQL Server queries and stored procedures that reduced API response times by **approximately 30%** on high-traffic endpoints — while also building and shipping RESTful APIs with ASP.NET Core and C# consumed by client-facing Angular modules. That hands-on backend delivery is exactly the kind of work I want to keep doing, and I am applying for the **Full Stack Developer / SDE role** at **[Company Name]** to do more of it.

My project work reflects the same full-stack focus. **HireFlow** is a recruitment pipeline SaaS — live in production — with Kanban workflows, JWT + TOTP authentication, RBAC, background jobs via Hangfire, and a responsive Angular 20 UI. **InsightFlow** is a document intelligence platform using FastAPI, HuggingFace BERT, and a RAG pipeline for semantic search and AI-driven Q&A over uploaded documents. Both projects were built end-to-end: architecture decisions, backend APIs, database design, and frontend integration.

I am especially interested in roles where I can contribute to scalable web applications, clean REST APIs, database-backed workflows, and user-facing product features. I hold an **Azure Cloud Services certification** and am comfortable across the full deployment cycle — from local SQL Server to Railway, Vercel, and Azure.

I would love to walk you through the HireFlow codebase — it is live and the architecture reflects the kind of scalable backend work I am looking for more of. Thank you for your time; I look forward to the conversation.

Sincerely,

Amrit Pal Singh
